

White EVA-S201W: The Game-Changer in Solar Panel Efficiency

White EVA-S201W: The Game-Changer in Solar Panel Efficiency

Why Your Solar Panels Need Better "Sunscreen"

Imagine your solar panels getting a power boost without expensive hardware upgrades. That's exactly what HIJUE New Materials' White EVA-S201W encapsulation film delivers. This innovative material acts like high-performance sunscreen for photovoltaic modules, reflecting light smarter while protecting cells better.

The Science Behind the Shine

Unlike traditional EVA films that lose 5-7% of light absorption, S201W's secret sauce includes:

- 90% light reflectivity across visible spectrum (400-700nm)
- Pre-crosslinked structure preventing "white overflow" defects
- UV resistance maintaining
